

DEEPWATERONE

Located over 30 miles east of Montauk, so far that it can't be seen, Deepwater ONE will harvest the strong, steady winds off Long Island's coast to provide clean, reliable energy for the East End. Using the most advanced technology from Europe, where over 2,000 offshore wind turbines are in operation today, Deepwater ONE will cost no more than a new fossil-fueled power plant.

HOME-GROWN ENERGY

Deepwater Wind is proud to be America's leading offshore wind developer, bringing clean air, cost-effective energy and economic growth to each of the communities in which we're active. Our Block Island Wind Farm will be the first offshore wind farm in America.

CLEAN ENERGY

REDUCES LONG ISLAND'S AIR EMISSIONS BY 2 MILLION TONS

120,000 LONG ISLAND HOMES POWERED BY DEEPWATER ONE

Timeline For **2015-2016** BLOCK ISLAND WIND FARM

- Healthy Communities
- Clean Energy
- Good Jobs

Kickstarting a new clean-technology hub in the Ocean State: The 30-megawatt, 5-turbine Block Island Wind Farm, in state waters three miles off the coast of Block Island, Rhode Island, is on track to be the nation's first offshore wind farm, generating energy by 2016.

SPRING 2015
Onshore pile fabrication starts in Rhode Island

LATE SUMMER 2015
Offshore construction starts. Foundations arrive from Gulf of Mexico and installed over 6 weeks; piles barged from Rhode Island to wind farm site

**WINTER 2015
SPRING 2016**
Onshore utility work on Block Island and mainland, and cable landing under Scarborough Beach

SPRING 2016
Cable vessel arrives and installs offshore cable

SUMMER 2016
Wind turbine components arrive in RI assembled

LATE SUMMER 2016
Turbine components leave RI port for wind farm site. Installed by specialised vessel over 4 weeks.

FALL 2016
Turbines are tested and commissioned. Block Island Wind Farm is operational!

America's First Offshore Wind Farm
